

# MODERN TECH ARCHITECTURE IS BRO

An abstract geometric diagram consisting of a central point connected to four other points, forming a diamond shape. These four points are further connected to each other, creating a network of lines. Some lines are solid, while others are dashed. The diagram is centered on the page, behind the main title.

Why 80% of engineers struggle with production

✦ OVERVIEW ✦

# The 73% Reality Check

Here is what happens under the hood.

# The 3 Pillars of Architecture

oms. Focus on decoupling state, asynchronous boundaries, and identifier

## ✦ THE PERFORMANCE SCALE ✦

Step 1: Isolate data boundaries. Step 2: Implement dead-letter queues. Step 3: Enable continuous observability.

# +202%

## HIGHER THROUGHPUT

Strategic decoupling prevents cascading outages under high load.

# Amateur vs Pro Approach

— KEEP EXPLORING

# The possibilities are endless.

**01. Start with REST APIs for standard web apps.**

---

**02. Move to GraphQL when optimizing payload sizes.**

---

**03. Use WebSockets only when real-time is mandatory.**
