

MODERN TECH ARCHITECTURE IS BRO

Why 80% of engineers struggle with production
implementation—and the exact blueprint to fix it.

✦ OVERVIEW ✦

The 73% Reality Check

Here is what happens under the hood.

The 3 Pillars of Architecture

oms. Focus on decoupling state, asynchronous boundaries, and identifier

✦ THE PERFORMANCE SCALE ✦

The Execution Flow

Step 1: Isolate data boundaries. Step 2: Implement dead-letter queues. Step 3: Enable continuous observability.

+202%

HIGHER THROUGHPUT

Strategic decoupling prevents cascading outages under high load.

✦ OVERVIEW ✦

Amateur vs Pro Approach

— KEEP EXPLORING

The possibilities are endless.

01. Start with REST APIs for standard web apps.

02. Move to GraphQL when optimizing payload sizes.

03. Use WebSockets only when real-time is mandatory.
